Order your sample today!

The Combi-Cam E is an eco-friendly electronic lock offering compact design and flexible features at a very attractive price. Although some may not care as much for the eco-friendly aspect, it does also translate into less frequent battery changes by the users of the lock which, of course, means less time spent changing batteries on all the locks installed in a particular job (i.e. some poor soul having to frequently change out hundreds of batteries at a time!)

All programming is controlled via master password with no expensive key to lose or become defective. The compact design of this product allows it to be a solution in a wide variety of applications. Great for lockers, medical carts, data racks, cabinets, safes, gun boxes and more! Ideal for gyms, schools, hospitals, hotels, care homes, etc.
